

- All file paths are from the root directory.
- Try to keep all image files in .webp format to keep Google Page Insights happy. This will make sure our website is not negatively affected in search results.
- To convert images into .webp, use cloudconvert.com

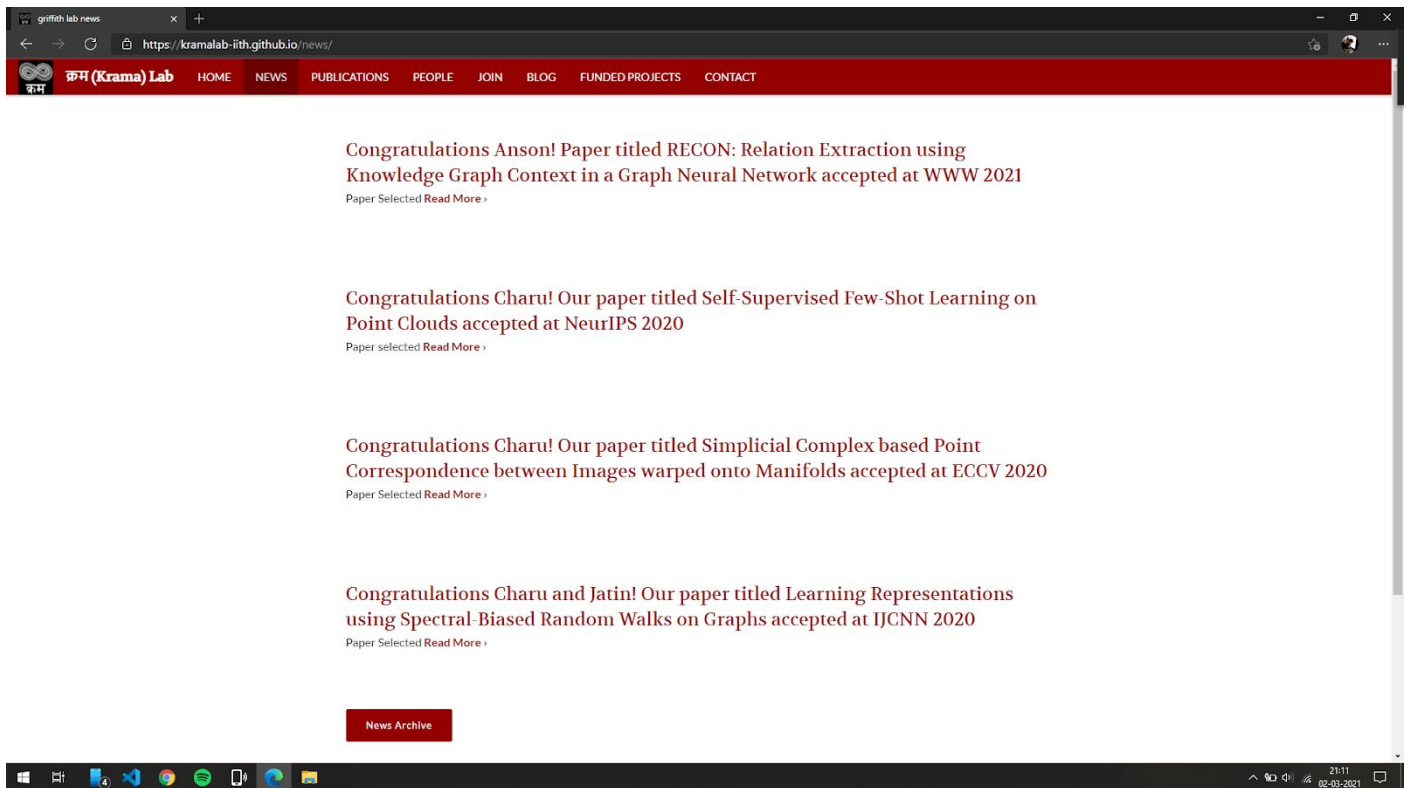

HomePage:

To change the content on right (highlighted in blue), change the file `/pages/pages-root-folder/index.md`. The content formatting can be done using HTML tags.

To change the logo and the text below it, change `/_layouts/frontpage_new.html`.

News:

To add a new news article, create a file in `/_posts/` in the format `YYYY-MM-DD-unique_id.md`

Copy the below text:

```
---
layout: page
title: ""
teaser: ""
header:
  image_fullwidth: "graph.jpg"
breadcrumb: true
---
```

The fields are:

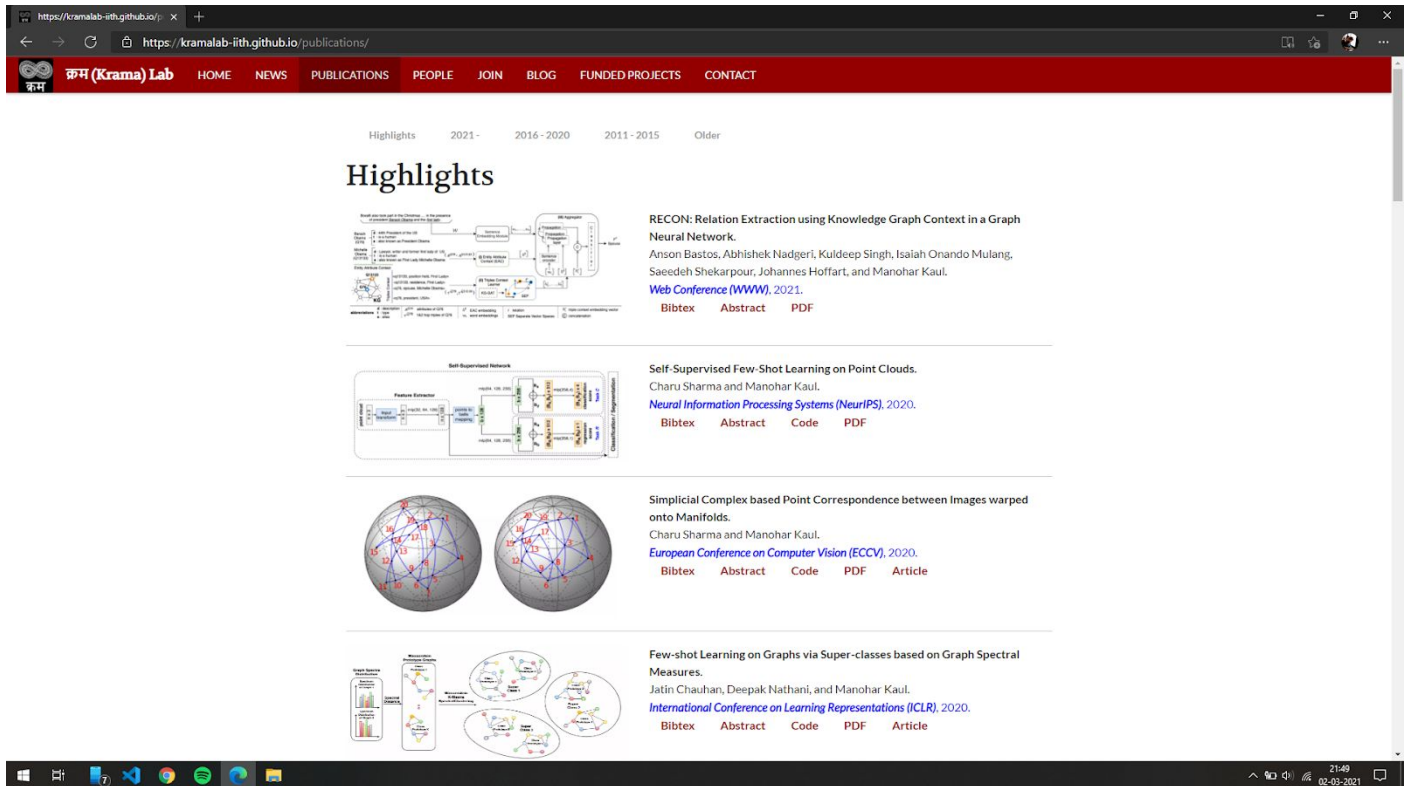

- **title:** This is the heading and the text in large size shown on the page.
- **teaser:** This is the small text written under the title.

Leave everything as is.

If you want to include more data that will be visible on opening the page associated with this news article, write it below `---`. This text is formatted using HTML tags.

Old articles will automatically move to archive.

Publications:

- **Adding paper to all publications list:**

The publications are grouped in order of 5 years.

Adding a new set of 5 years:

Go to the section labeled **TOP BAR**. Copy the following line on top:

```
<li data-magellan-arrival="20XX_20XX"><a href="#20XX_20XX">20XX - 20XX</a></li>
```

Replace XX by appropriate year. Add a new section in **NEW SECTIONS GO BELOW**. Place it on top of existing sections.

In the new section, copy the following line on top

```
<h2 data-magellan-destination="20XX_20XX">20XX - 20XX</h2><a name="20XX_20XX"></a>
```

Replace XX by appropriate year.

Adding a paper to an existing section:

Find the appropriate section and copy the following lines on top.

```
{% include publication
id=""
title=""
abstract=""
authors=""
journal=""

year=""
pdf=""
eprint=""
%}
```

- **id:** Same as in ArXiv. Will appear in Bibtex
- **eprint:** Same as in ArXiv. Will appear in Bibtex

• Adding publication to highlights:

To add a publication in highlights, change the file `_includes/highlighted_publications.md`. Copy the following text.

```
{% include highlight
id=""
title=""
abstract=""
authors=""
journal=""

year=""
pdf=""
eprint=""
image="/assets/img/publication"
%}
```

The text is the same as in all publications, just **include publication** is replaced by **include highlight** and added **image** field. Place the image in `/assets/img/publication` and add the correct path.

• Using Math in Summary:

Mathjax has already been included.

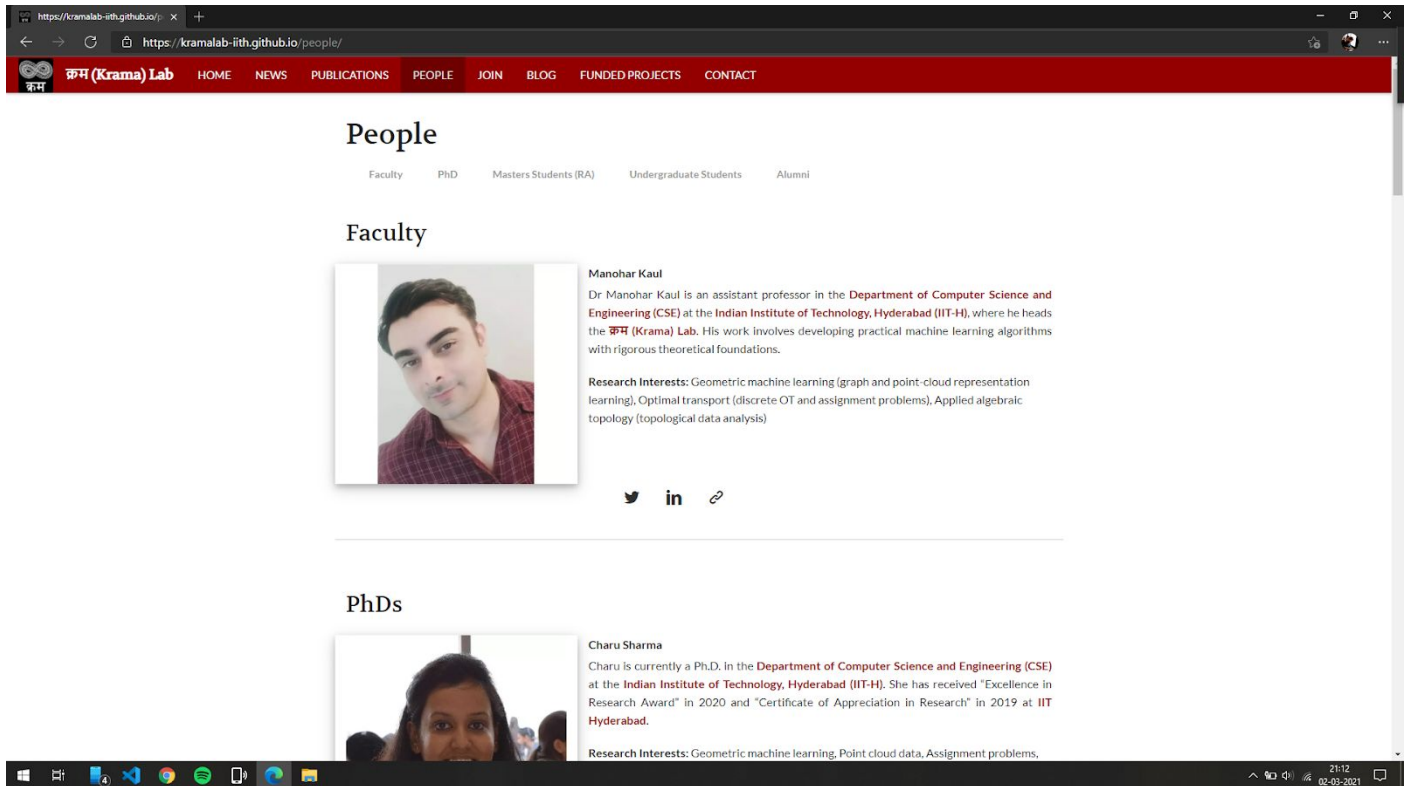

To add mathematics, include it inside `/ (/)` if you want to write it inline, i.e without creating a new line.

To write mathematics in a new line, include it inside `/ [/]`.

To create a math block use `$$ $$` and write the math content inside it.

The webpage will always use the latex version of MathJax. If something breaks, check the documentation at <http://docs.mathjax.org/en/latest/web/start.html>.

People:

To add new people, change `/pages/people.md`.
Find the appropriate position header. Copy the below text

```
{% include team_member
member_name=" "
full_name=" "
bio='<p align="justify">
</p>'
image="/assets/img/team/default.webp"
interests=" "
%}
```

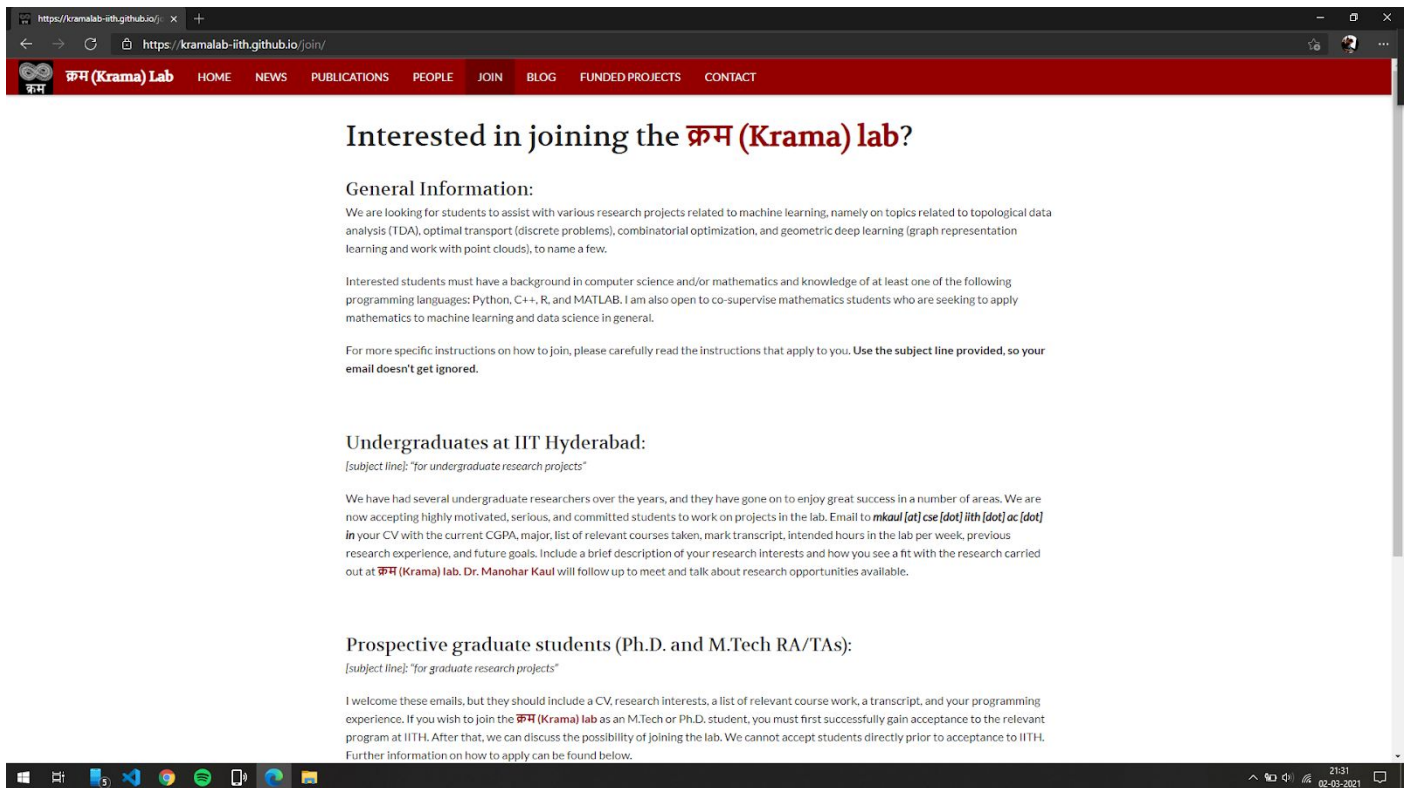

The students will appear in the order as written in the file. Add image file in `/assets/img/team/` and add correct path in **image**

To add social media information about people, edit `_data/socialmedia.yml`. Copy the below text, order does not matter here.

```
- member_name:
  social:
    - name: GitHub
      url:
      class: icon-github
      title: "GitHub Profile"
    - name: Twitter
      url:
      class: icon-twitter
      title: "Professional Twitter account"
    - name: linkedin
      url:
      class: icon-linkedin
      title: "Professional LinkedIn account"
    - name: dblp
      url:
      class: icon-dblp
      title: "Professional DBLP account"
    - name: Link
      url:
      class: icon-link
      title: "Personal Website"
    - name: scholar
      url:
      class: icon-scholar
      title: "Professional Google Scholar Account"
```

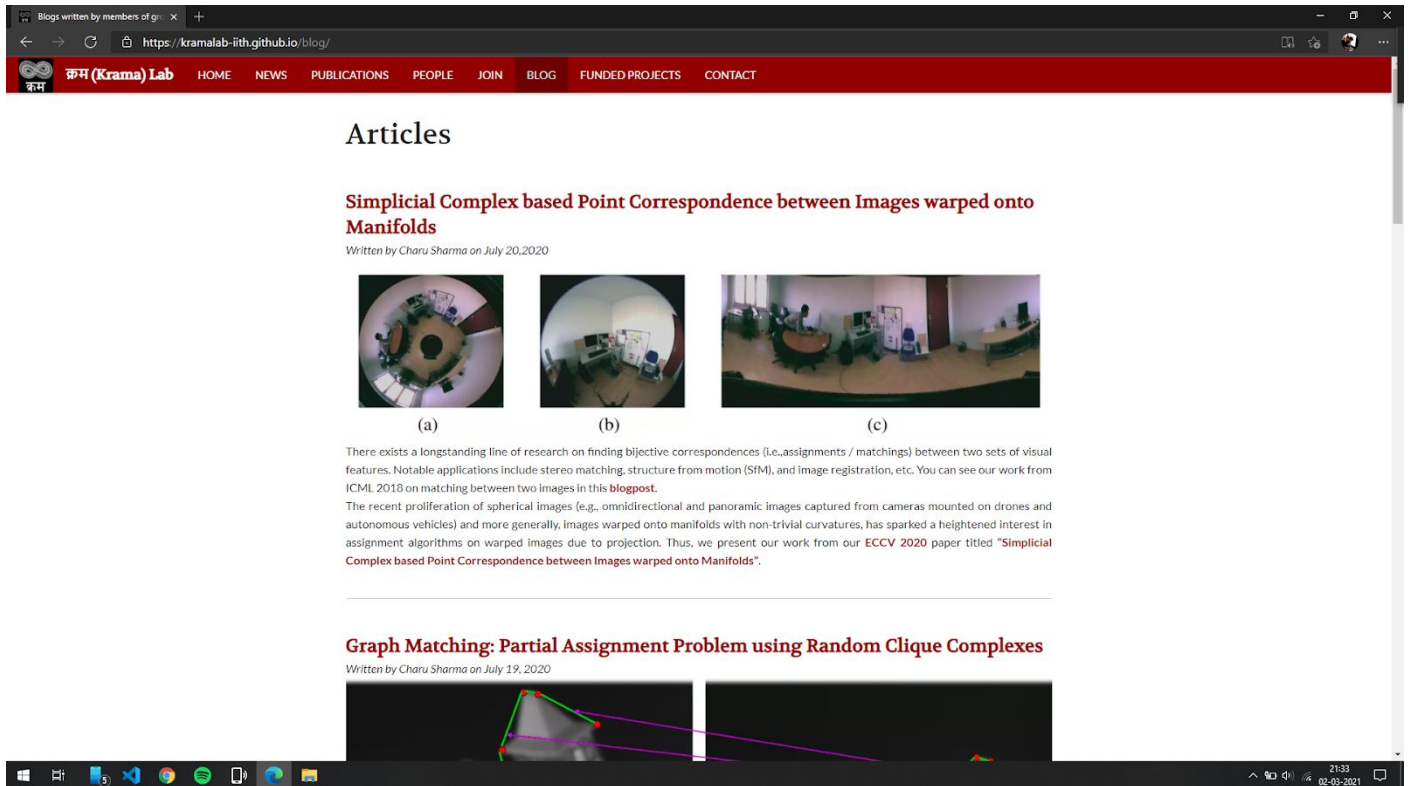

Make sure **member_name** is the same at both places.

Join:

To change any information on this page, change the file `/pages/join.md`. Text formatting can be done using HTML tags.

Blogs:

To add a new blog change the file `/pages/blog.md`. Copy the below text:

```
{% include blog
title=""
image="/assets/img/blog/"
author=""
date=""
link=""
summary='<p align="justify">

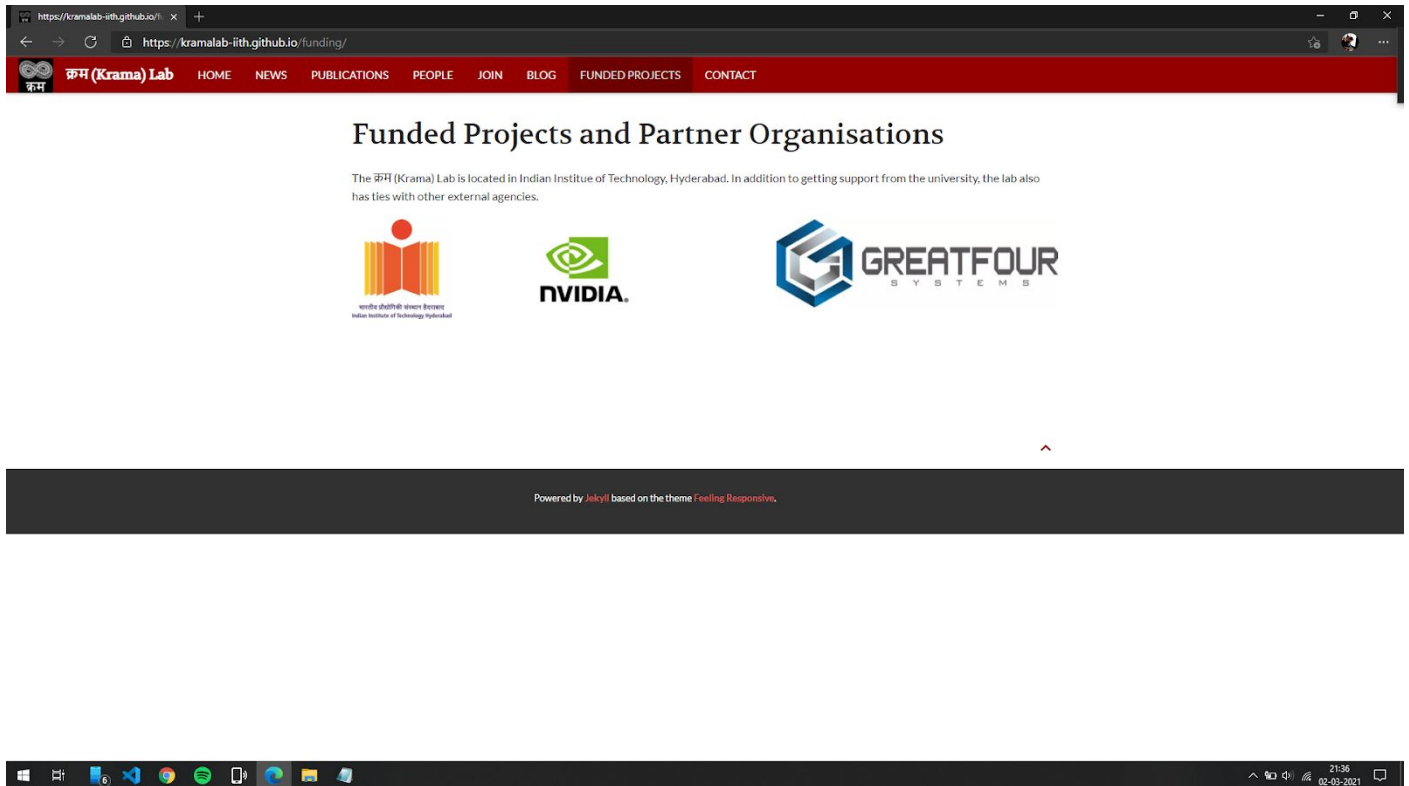

</p>'
%}
```

The fields are:

- **title:** The title on top
- **summary:** all the text. Formatted using HTML tags.

Add the image in `/assests/img/blog/` and put correct path in the image tag.

Funded Projects:

Change the file `/pages/funding.md`. Since this page will mostly consist of images, it is divided into rows where each row will contain a specific number of pictures.

To add a row put the following lines:

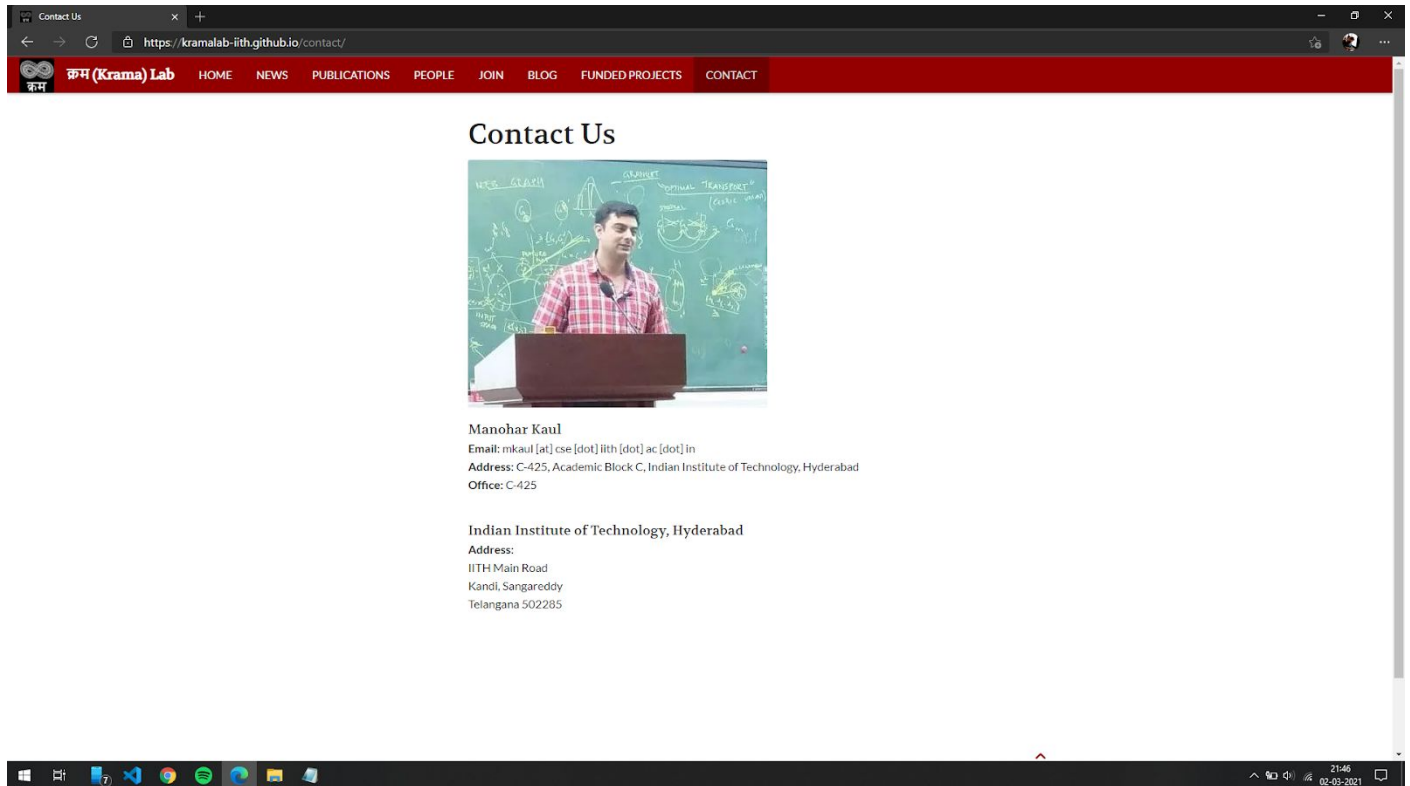

```
<div class="row">
</div>
```

Inside a row, put the following lines for each image:

```
<div class="small-3 columns">
  <a href="">
    
  </a>
</div>
```

The number with **small**- can be changed to increase or decrease the width of the image. The height of the image will change accordingly. Put the images in `/assets/img/funding/`.

Contact:

To change the details on this page, change the file `/pages/contact.md`. Formatting is done using HTML tags.

About Name:

To change the details on this page, change the file `/pages/about_name.md`. Formatting is done using HTML tags.

Adding new navigation item:

To add a new navigation item, change the file `/_data/navigation.yml`. The format for adding new navigation is given in the file.

Future Page Layouts:

Some extra page layouts are given in `/_drafts` folder. They may be used as necessary.

Errors:

- `param:"value1" param2:"value"` type of error.
This will occur when data is changed where `field = ` `` exists. This is on pages such as blogs, publications, people, and news. Make sure all ` occurring between the text are properly delimited by `/`.

Development:

Development instructions are given in the README.md file in the git directory.
